Despite its small size, Maryland is a diverse state. Its 24 jurisdictions sometimes have very different populations, and, consequently, may have very different needs. While statewide data can be extraordinarily helpful to state-level program managers and policymakers, it may not reflect the customers that local departments of social services see in their offices.

To assist local departments in better serving their Temporary Cash Assistance (TCA) customers, we examined adult recipients in 18 of the 24 jurisdictions over the last few years (SFY 2016-2018). This brief profiles Anne Arundel County, one of the remaining jurisdictions in this installment. Anne Arundel County is located in central Maryland. It is part of the Baltimore-Columbia-Towson Metropolitan Statistical Area, meaning that there is a high degree of economic integration among the counties1 in this area (U.S. Census Bureau, 2018a). Six percent of families with children under the age of 18 in Anne Arundel County were living below the poverty line between 2014 and 2018, less than the statewide percentage of 9.8% (U.S. Census Bureau, 2019b). In addition to lower poverty, the county had a median annual family income of $112,549, which was higher than the median family income for Maryland ($99,403). (U.S. Census Bureau, 2019b).

Anne Arundel County, one of Maryland’s most populated counties (U.S. Census Bureau, 2018b), makes up 7% of the TCA caseload (Gross & Passarella, 2020). As one of the most populated counties, it is valuable to note the ways in which adult recipients in this county differ from the state as a whole. Table 1 provides an overview of the demographic characteristics of adult recipients. Anne Arundel County TCA recipients are typically African American (54.6%) or Caucasian (39.2%) women (91.4%) in their early 30s who never married (75.9%). Compared to Maryland as a whole, Anne Arundel County recipients are more likely to be Caucasian and less likely to be African American.

For adult recipients who are required to work or to participate in work-related activities, educational attainment is a particularly important characteristic, as it can affect the job opportunities that are available to them. Figure 1 presents educational attainment among Anne Arundel County adult recipients alongside adult recipients statewide and in other jurisdictions. The lines represent the range of values across all 24 jurisdictions, with the bars at the top and bottom indicating the statewide high—the highest value across all jurisdictions—and the statewide low—the lowest value across all jurisdictions. The square indicates the statewide average, and the colored diamond denotes Anne Arundel County.

Comparing Anne Arundel County with the rest of the state shows that adult recipients in Anne Arundel County have somewhat higher levels of educational attainment than their counterparts elsewhere. One fifth (20.2%) of Anne Arundel County adult recipients did not yet finish high school or receive a GED, which is lower than the statewide average of 26% and much lower than the statewide high of 34%.

Figure 1. Educational Attainment

Note: High refers to the jurisdiction with the highest percentage. Low refers to the jurisdiction with lowest percentage. General Education Development Program (GED) certificates are included in high school completion rates. Valid percentages reported.
In addition, the percentage of adult recipients in Anne Arundel County who finished high school (and did not receive additional education) was higher than the state average (68.1% vs. 63.7%). Additional education beyond high school for Anne Arundel county recipients (11.6%) was on par with the state average (10.2%) and was roughly 10 percentage points higher than the statewide low. This suggests that some recipients in Anne Arundel County have education or training beyond high school that could lead to well-paid jobs.

While Anne Arundel County adult recipients generally have higher educational attainment than recipients statewide, providing more opportunities for increasing educational attainment could prove beneficial. Our research shows that economic stability and good jobs are more likely when adults have more education (Nicoli, Passarella, & Born, 2013; James & Nicoli, 2016). More specifically, those without a high school diploma are more likely to return to TCA while adults with education beyond a high school diploma are more likely to attain median annual earnings above the poverty level (McColl & Passarella, 2019). In addition, a recent report showed that single mothers in Maryland are less likely to live in poverty and earn substantially more after graduating with an associate degree (Center on Equity in Higher Education). Taken together, these findings suggest that additional education—either in the form of a high school diploma or education beyond high school—could improve the chances of Anne Arundel County recipients achieving self-sufficiency.

The Maryland Department of Human Services is already pursuing potential strategies for increasing educational attainment and improving recipients’ job skills by partnering with the Maryland Department of Labor’s Division of Workforce Development and Adult Learning. Career training and job seeker services can help TCA recipients with any number of goals,

Data and Study Population

Data comes from the Client Automated Resource and Eligibility System (CARES) and the Maryland Automated Benefits System (MABS), which are the administrative data systems for Temporary Cash Assistance (TCA) and Unemployment Insurance (UI), respectively. CARES provides individual- and case-level data on demographics and program participation for families receiving TCA. Additional data on adult recipients’ disabilities comes from WORKS, which documents participation in work and work-related activities. The MABS system includes data from all employers covered by the state’s Unemployment Insurance (UI) law and the Unemployment Compensation for Federal Employees (UCFE) program. Together, these account for approximately 91% of all Maryland civilian employment. There are a variety of limitations to MABS data. MABS only reports data on a quarterly basis, which means that it is not possible to calculate weekly or monthly employment and earnings. Another limitation is that MABS does not contain data on certain types of employment, such as self-employment, independent contractors, and informal employment; consequently, earnings from under-the-table jobs are not included. Finally, MABS has no information on employment outside Maryland. Approximately nine percent of Anne Arundel County residents work out of state, which is higher than the national average (3.7%) but far below the state average (16.8%) (U.S. Census Bureau, 2019a). As a result, we may be understating employment and some earnings. The study population in this report is the unique number of adults who received at least one month of TCA in SFY 2019 (July 2018 to June 2019). Statewide, 18,510 adults received TCA in SFY 2019; in Anne Arundel County 1,121 adults received TCA.
from vocational training or GED attainment to improving interview skills. The federal government encourages this type of partnership through the Workforce Innovation and Opportunity Act (WIOA). Additionally, Anne Arundel Community College offers free childcare to low-income students through the U.S. Department of Education’s Child Care Access Means Parents in School Program (U.S. Department of Education, 2019). This grant gives low-income parents a chance to obtain job training or earn a degree without the costly burden of childcare.

Partnerships with other entities within Maryland’s workforce development system may also benefit adult TCA recipients with disabilities. Figure 2 shows the percentage of adult recipients who have disabilities that are expected to persist for longer than 12 months. The figure includes the percentage for Anne Arundel County adult recipients, the statewide average, and the statewide high and low values across all jurisdictions. About one quarter (23.0%) of adult recipients in Anne Arundel County have a long-term disability, slightly less than the statewide average, but more than the statewide low of 16%. There are only six jurisdictions with a lower percentage than Anne Arundel County, suggesting that the county is less likely to have recipients with this barrier than their counterparts across the state.

All adult recipients with disabilities are eligible to receive assistance with applications for federal disability programs, like Supplemental Security Income (SSI), and caseworkers can offer assistance with applications for disability programs through a statewide contract with a vendor. The majority of TCA recipients, though, do not successfully receive SSI, despite submitting one or more applications (McColl & Nicoli, 2018).

For those with long-term disabilities who want to work, the Division of Rehabilitation Services (DORS), located within the Maryland State Department of Education, may be an excellent resource. Like TCA, DORS is part of Maryland’s workforce development system, so this is another way that closer collaboration with workforce partners may benefit TCA customers.

**Figure 2. Percent with Disabilities Lasting 12+ Months**

![Bar graph showing the percentage of adult recipients with disabilities lasting more than 12 months.](image)

**Note:** High refers to the jurisdiction with the highest percentage. Low refers to the jurisdiction with lowest percentage. Valid percentages reported.

As TCA continues collaboration with its workforce development partners, understanding adult recipients’ work histories becomes even more important. The past employment experiences of adult recipients can shape their future employment and earnings, or highlight opportunities for professional training or other employment services. Figure 3 displays the percentage of adult recipients who worked in the year before they began receiving TCA. Three in five (61.4%) Anne Arundel County adult recipients were employed in that year, a few percentage points higher than the state average of 58%. 

![Bar graph showing the percentage of adult recipients employed in the year before receiving TCA.](image)
It is also useful to examine how many quarters adult recipients worked in the year before receiving TCA. Figure 4 presents the percentage of employed adult recipients who worked in all four quarters in that year. More than two in five (43.8%) Anne Arundel County adult recipients worked in all four quarters prior to receiving TCA, compared to the statewide average of 38%. Half (50.0%) of employed recipients worked for all four quarters in the jurisdiction with the highest percentage, only a few percentage points higher than in Anne Arundel County.

Even though 61% of Anne Arundel County recipients worked at some point in the year before TCA receipt, less than half (43.8%) of employed recipients worked for all four quarters suggesting that adult recipients may need more than just assistance in finding employment in order to become self-sufficient. These findings indicate that many adult recipients work, but the majority who do work do not work consistently over the course of a year. Thus, while some adult recipients may need substantial assistance to find employment, most who find employment may need services to help them maintain employment or to navigate seasonal or short-term employment.

Along with their employment histories, it is also important to examine adult recipients’ earnings histories. Figure 5 displays median earnings for adult recipients in Anne Arundel County who were employed in the year before they received TCA, along with median earnings statewide and the highest and lowest median earnings in the 24 jurisdictions. These earnings may not necessarily reflect full-time employment over the course of an entire year. As Figure 4 demonstrated, only 44% of Anne Arundel County adult recipients worked for all four quarters of the year before TCA receipt.

Anne Arundel County adult recipients who worked earned a median of $7,235 in the year before TCA receipt. This is about $1,000 more than the statewide average of

---

---

5
$6,298 and about $1,600 greater than the statewide low. However, median earnings for both Anne Arundel County recipients and recipients statewide were substantially lower than $21,330 the 2019 federal poverty threshold for a three-person household (U.S. Department of Health and Human Services, 2019), and, expectedly, earnings were considerably lower than the county’s median earnings for full-time, year-round workers (U.S. Census Bureau, 2019c).

One strategy to increase wages focuses on the industries in which adults work. Some jobs can be performed in a number of different industries. For example, administrative assistants may work in health care settings, in schools, or in private firms, but each of these industries may differ in the compensation they offer for administrative assistant positions. Helping adult recipients find employment in industries that offer higher pay is one way to increase self-sufficiency.

In Anne Arundel County, about half of all employed residents hold positions in one of the following industries: (1) educational services, healthcare, and social assistance; (2) professional, scientific, management, administrative services, and waste services; and (3) public administration (U.S. Census Bureau, 2019c). Some of the largest employers in Anne Arundel County fall under these industries, such as Anne Arundel Medical Center, H&R Block, Northrop Grumman, and the University of Maryland Baltimore Washington Medical Center (Office of Workforce Information and Performance, n.d.).

Anne Arundel County TCA adult recipients on the other hand, are more commonly employed in industries that may be associated with lower earnings, as shown in Table 2. As shown, one quarter (25.2%) of adult recipients worked in restaurants. An additional 11% worked in the administrative sector, 8% worked in general retail, and 7% worked in nursing homes. A few of the largest employers in Anne Arundel County that fall under these industries include Giant Food, Walmart, and McDonald’s (Office of

Note: High refers to the jurisdiction with the highest percentage. Low refers to the jurisdiction with lowest percentage. Earnings are standardized to 2019 dollars.

Low median wages may be partially explained by the inconsistent work patterns described in Figures 3 and 4, since inconsistent employment drives total earnings down. However, it could also be that low wages are also what precipitates inconsistent work patterns. For example, adult recipients may not earn enough to be able to cover job-related expenses, such as transportation, uniforms, or child care, which may limit employment retention.

---

3 Businesses can have more than one NAICS code. The Maryland Department of Labor reports one code per business and reports Walmart under the manufacturing NAICS code. Walmart is also represented by the three digit NAICS code 452, general retail. Please see U.S. Census Bureau for more information or for a general description of NAICS code 452.
Workforce Information and Performance, n.d.)

Prior research has found that none of the top three industries in which Anne Arundel County adult recipients were employed are associated with high earnings. Individuals who left TCA and initially worked in one of these industries, particularly restaurants and general retail, had below-average earnings and were more likely to return to TCA (Nicoli, Passarella, & Born, 2014). They were also less likely to realize economic stability after exiting TCA (James & Nicoli, 2016). Thus, helping adult recipients find and maintain work in industries that provide higher pay to their workers, or providing training or other education for positions within these industries, may help increase earnings for these recipients.
